# Planetary Weather Fact Card

1. In 2006, one of NASA's spacecrafts may have spotted a hurricane on the surface of this planet
2. The atmosphere here is divided into 3 different cloud layers with the lowest layer being made up of water ice crystals
3. This planet experiences high-speed "jet Streams" which at the equator reach about 1,100 miles per hour. These are the fastest winds in the solar system
4. Something called the Great White spot appears every 28 years - it's a giant white storm
